Laboratory sound insulation by sound intensity

Intensity sound reduction index R_I measured in accordance with ISO 15186-1:2000 (transmitted sound power measured directly with an intensity probe). Rating per ISO 717-1:2020.

$R_{I,w}$ (C; C_{tr}) = **30 (-2; -3) dB**

Evaluation based on laboratory measurement results obtained by the sound-intensity method (transmitted sound power measured directly over the measurement surface). S = 10 m²; S_m = 12 m² (ISO 15186-1:2000 Clause 8).

Result vs requirement: $R_{I,w}$ = 30 dB, required ≥ 30 dB → **PASS**
